South East Asia Flow Measurement Conference Announced

NEL announces the launch of the South East Asia Flow Measurement Conference to be held on 6-8 March, 2012 at the InterContinental, Kuala Lumpur, Malaysia.

The Conference will tackle the hydrocarbon flow measurement challenges facing the South East Asia region, where measurements made have significant economic and environmental implications. Building on 10 years of experience delivering technical workshops and training courses in the region, NEL has developed this Conference to help delegates stay ahead of developments in flow measurement technology, regulation and practice.

The format for this event will encompass not only technical presentations from leading world experts but incorporate half and full day training courses which will give delegates the flexibility to schedule attendance around existing work commitments.

The flexible structure will include both theoretical and real-world experiences from global organisations. The Technical Conference will cover a range of topical issues relevant to the industry today. Manufacturers from around the world will also be showcasing the latest technology for achieving more accurate hydrocarbon flow measurement

Topical training sessions from NEL in association with Kelton Engineering, NuLab Limited, SGS Oil Gas and Chemicals, and TransCanada Calibrations will run in parallel to the Technical Conference providing maximum knowledge sharing throughout the duration of the Conference.

Alick MacGillivray, Principal Consultant at NEL and Conference Chair, said: "Over the last decade, this conference has become an excellent opportunity for the industry to debate the

topical issues that are impacting their businesses in the region. This year's comprehensive agenda will help every delegate better understand how they can tackle the complex issues of accurate flow measurement. They will leave the Conference with a better technical understanding to make a more informed choice about the equipment and services that will help them shape the future direction of their business."

The Technical Committee leading the direction of the presentations includes industry leaders from globally recognised organisations including KROHNE Oil & Gas, NEL, PETRONAS, Sarawak Shell Berhad, Saudi Aramco, and Schlumberger.

About NEL www.tuvnel.com

NEL is a world-class provider of technical consultancy, research, testing, flow measurement and programme management services to the energy, oil & gas and manufacturing industries, as well as government.

NEL is a global centre of excellence for flow measurement and fluid flow systems and is the custodian of the UK's National Flow Measurement Standards. As an international technology services organisation and provider of pipeline fluid management services to the global petroleum industry, NEL has an impressive track record in the development, design and application of new technologies.

NEL is a part of the TÜV SÜD Group, an international service organisation with over 16,000 employees in more than 600 locations worldwide.
